Intermediate and Senior Architect Positions

About us:

Decibel Architecture (dB(A)) is an architectural practice established at the beginning of 2016. Over 1 year in, we are looking to add some good people to our happy team of 16. We are a company that believes in and operates a diverse workplace, so being on board with this is non-negotiable.

The roles:

Let's cut to the chase, all job descriptions these days require candidates to have a strong passion for design, be meticulous, self-motivated, able to work in a team, able to work by themselves, be great in adobe, excel at myriad 3d programs and also have excellent construction knowledge and documentation experience...easy.

If you can tick all of the boxes above, fantastic, but we'd also like to hear from you if your personal venn diagram of skills and experience encompasses most of the above, and some stuff we haven't listed. We believe in being able to teach you skills you may not have, and hope you can do the same for us.

The most important quality you will have is an ability to constructively embrace and engage with our core values – knowledge, radicalism and play. These three concepts guide our work, and in practice this results in our team constantly expanding their skills as we seek to design a better future.

We are on the hunt for two new awesome people:

1. Senior Architect who has strong leadership skills and is great at doing what you do
2. Intermediate Architect who is recently registered or an experience Graduate Architect who is looking to become registered in the next 1-2 yrs.

You will both be working on projects that vary greatly in scale and complexity, and you must be comfortable working within various teams and across project types simultaneously. Rather than list the projects we have on the drawing board, we'd prefer to meet good candidates and match them to the kind of work we're doing, and that we are interested in doing.

The office:

Decibel Architecture is housed in our newly refurbished studio in the world's greenest office building, Pixel, in Carlton. Pixel is a 'Future Office' – a prototype of the commercial buildings that will

deciBel(Architecture)))

emerge when a carbon constrained environment demands a greater focus on energy efficiency. We're here because we are walking the talk, and this resonates with our diverse client base.

If you think you have something to give, and that you could be part of our story, please email a brilliant letter, an outstanding folio and your vital details (max 10mb) to mail@db-a.co
